

# TCA 25%

## ACTIVE INGREDIENT - Trichloroacetic Acid

- TCA 25% (Trichloroacetic Acid) Peel is a medium-depth chemical peel designed for intensive skin resurfacing and correction. It works by causing controlled coagulation of skin proteins, leading to exfoliation of damaged layers and stimulation of new skin formation.
- This concentration is commonly used to treat deeper pigmentation, acne scars, uneven texture, and photoaging. Due to its strength, it must be performed strictly under professional medical supervision.

## INDICATIONS

- Acne Scar
- Deep Pigmentation
- Fine Lines
- Sun Damage
- Uneven Texture
- Stretch Marks

## BENEFITS

Medium-depth resurfacing for visible skin renewal

- Effective for stubborn pigmentation and melasma
- Improves acne scars (superficial to moderate)
- Reduces fine lines and early wrinkles
- Refines rough and uneven texture
- Stimulates collagen remodeling
- Improves sun-damaged skin
- Enhances overall skin tone and clarity
- Provides long-lasting corrective results
